More smart functions for option

Setting

Setting interface for language/theme/batch operations

In Batch Operations interface you can add all devices at one time/edit group together/delete network and device

4. Add device(s) into the App

Please Take Note First:

- 1.) Turn on the devices, you'll observe they're presenting in a lighting pattern of breath. It indicates that they're ready to be paired into the App. When the lights turn to blue, it indicates adding is successful, you can control them
- 2.) If either a fixture or remote controller is not responding at all, please get close to the APP and try again.
- 3.) The Bluetooth range extender is required for the use of smart lights for effectively running whole system
- 4.) The Coverage of extender is within 98ft range

Steps>>>

- Make sure the Bluetooth on the devices is ACTIVE
- Make sure turn on power of the fixtures or other devices you want to add
- Click + to add device or create groups/rooms/scen
- Click + on search device page to add device you want to control
- Use "Batch Operations" in the setting page and add more devices at one time

Bluetooth devices showing on the Searching device interface

The numbers manifesting from 1 to 100 represent the strength of the Bluetooth signal. The smaller number, the stronger the signal it is. For instance, the device shows 61 is more close to you than the device shows 80. By clicking the map icon, you can identify the device. The respondent device will present a breathing pattern light when you click the map icon.

5. Create group

- Click + to create groups/rooms
- Enter a group name and save
- Click + on Edit group page to add the devices that you want to control in one group

6. Edit device/group icon name

- Return home page
- Long Press for any device or group icon enter to edit interface
- Edit the icon name/delete/unpin the device or group you want
- Press "OK" after edit

7. Use the interface for multiple operations.

- Return home page
- Short Press for any device or group icon that you want to control enter to dimming/mode/timing control/ advanced control

1.) Click "Dimming " for more lighting themes

- Dim from 0 to 100
- Choose the colors and saturation
- Choose the CCT ranging from 2200K to 5000K

2.) Click "Mode" for more lighting themes

3.) Click "Timing control" for timing function

Note: Timing control only working for unit device but not group unless you connect with a gateway in the network

4.) Click "Advanced" for more smart functions
